Marlo Simon Noval

front-end web developer always, back-end dev sometimes

Summary

Front-End is overwhelming, I swam in the vast realm of tomato sauce poured in a maintainable spaghetti code just to do a tiny push of a pixel.

Back-end developers loves designers who code. Being in the front-end pool crosses my boundaries of user interface design and development.

My bonus points:

* Blurred the lines between front-end and back-end development
* Not afraid of cross browser nuances
* Ensures maintainable and modular code
* Loves the command line
* Huge fan of using version control such as Mercurial and Git
* Able to collaborate with other engineers, designers and product managers
* Experience with awesome web technologies, SASS, HAML, Middleman, SingularityGS

Experience

Web Developer

Flava Design LLP
April 2013 - Present
994 bendemeer road b-central #07-03 singapore 339943

* Developed static websites in Jekyll (jekyllrb.com) and Compass (compass-style.org)
* Developed static websites using Middleman (middlemanapp.com)
